EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kavita Lepping on 3/13/06.

2. The application has been amended as follows:

In claim 4, the paragraph

"the second device has an initialization control signal generator for generating an initialization"

has been changed to

--the second device has an initialization control signal generator for generating an initialization control signal when the receiving circuit detects a transmission error in the encrypted signal;--

Allowable Subject Matter

3. This action is in response to the communication dated December 20, 2005 with the amendments to claims 4 and 11 and the cancellation of claims 1-3, 6-10 and 13.

4. Claims 4-5 and 11-12 are allowed.

5. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a secure transmission system and method for encrypting and decrypting signals, and transmitting and receiving the encrypted

signals with the encryption and decryption keys are generated from the signal itself. Each independent claims (claims 4 and 11) identifies unique features "the receiving circuit in the receiving section in the second device detects transmission errors in the encrypted signal; the second device has an initialization control signal generator for generating an initialization control signal when the receiving circuit detects a transmission error in the encrypted signal; the second device also has a transmitting circuit for transmitting the initialization control signal to the first device; and the first device has a receiving circuit for receiving the initialization control signal and thereupon sending an initialization command signal to the encryption circuit, the encryption key generator, and the memory in the transmitting section". These limitations allow the system to detect transmission errors, to send and to receive initialization command, control and reply signals. The closest prior art, Bright et al. (4,893,339) and the admitted prior art fail to anticipate or render the above limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Minh Dieu Nguyen whose telephone number is 571-272-3873.
